YASH RAJESH SALI

Mumbai, Maharashtra, India | salirajesh7@gmail.com | yashsali.me | github.com/YASHSALI2005 | linkedin.com/in/yashsali05

SUMMARY

Machine Learning Engineer at EnPointe IT Services (joined as an ML intern, converted to full-time), building ML and GenAI systems end to end: model training and fine-tuning (wake-word detection, demand and time-series forecasting), RAG pipelines for LLM-powered web applications, and the data pipelines and APIs behind them. Full-stack background; co-author of an IEEE-published paper.

EXPERIENCE

Machine Learning Engineer — EnPointe IT Services Pvt. Ltd. **Jan 2026 – Present**

- Building and maintaining ML and Generative AI solutions for production use.
- Engineered and fine-tuned custom ML models, including wake-word detection and time-series forecasting, on datasets built through automated data extraction and preprocessing workflows.
- Developed and deployed Retrieval-Augmented Generation (RAG) pipelines integrating LLMs into existing web applications, working with the full-stack team to take models from research to production APIs.

Full Stack Developer Intern — EnPointe IT Services Pvt. Ltd. **Jun 2025 – Jan 2026**

- Built and maintained full-stack web applications (incl. the Vrott Dashboard) with Next.js, React.js, Node.js and Express.js.
- Designed RESTful APIs; worked in an Agile team with Git/GitHub, debugging and optimising for performance.

PROJECTS

Clickk — AI Coding Assistant **Aug 2025 – Nov 2025**

- AI coding assistant for code generation, error detection and fix suggestions: static analysis (file-structure parsing, AST checks) locates errors, and Llama 3.2 via Ollama explains and fixes them.
- React.js front end with a Node.js/Express.js back end managing model calls. Published at IEEE IC3ET 2026.

Noah Scheduler — ML Cinema Session Scheduling (client project) **May 2026 – Aug 2026**

- Built a LightGBM occupancy model (plus P10/P50/P90 quantile models) on 94K+ shows across 9 cinemas; beat both naive baselines at every cinema, cutting show-level WAPE to 54.3% vs 66.7% on an unseen test month.
- Served predicted schedules through a multi-tenant FastAPI/PostgreSQL pull API fed by a worker pipeline (extract, score, schedule, publish), with a model registry and per-tenant feature mapping.

Noah Stock — Inventory Par-Level Planning (client project) **Jul 2026 – Oct 2026**

- Replaced a manual weekly-average + flat-10%-buffer method with a demand-driven par engine: empirical demand over the review + lead-time window, newsvendor service levels per item, and calendar-based seasonality (Ramadan/Eid).
- Ranks the work queue by expected lost margin; validated by backtesting old vs new method on a year of history across 9 cinemas. FastAPI, PostgreSQL, Redis, React.

PUBLICATION & CERTIFICATIONS

- **IEEE:** "Clickk: An AI-Powered Code Editor for Intelligent Debugging and Automated Error Resolution," IC3ET 2026 — ieeexplore.ieee.org/document/11467195
- **Google Cloud Study Jam 2023–24** (GDSC): cloud infrastructure, VMs, storage and deployment.

TECHNICAL SKILLS

Machine Learning: PyTorch, LightGBM, PyTorch, CNNs, time-series & demand forecasting, inventory optimisation, wake-word detection, fine-tuning, model evaluation

GenAI & LLMs: RAG pipelines, LLM integration, Llama 3.2 / Ollama, AST-based code analysis

Languages & Data: Python, Java, JavaScript/TypeScript, SQL (PostgreSQL, MySQL), MongoDB, data extraction and preprocessing

Engineering: FastAPI, Flask, REST APIs, Node.js/Express, React/Next.js, Docker, Git, Vercel, Render

EDUCATION

A. C. Patil College of Engineering, University of Mumbai **Graduated Jun 2026**
Bachelor of Engineering (B.E.) in Information Technology — CGPA: 8.20 (overall)

HSC (12th Grade) — D. G. Tatkare College, Kolad, Maharashtra **2022**
SSC (10th Grade) — D. G. Tatkare College, Kolad, Maharashtra **2020**
